TEXTILE PARTS

## SAXONIA: Global Player.

**A synonym for quality, SAXONIA has been a leading international supplier of parts and components for warp knitting machines for the manufacture of technical textiles for many years now.**

- Geometry tailored specifically to the application for the highest level of reproducibility.
- Perfect stamping quality, even with extremely hard or alloyed raw materials.
- For highly abrasive materials, wear-resistance is optimised through the use of the appropriate materials and technologies, for example partial hardening to enhance the existing standard needles and sinkers.

Through continuous development and research into improving wear-resistant surfaces, use of the latest manufacturing technologies, and a largely automated production process, we can guarantee a consistently high quality.

Perfect stamping technology combined with perfect rounding – the hallmark of SAXONIA.

**SAXONIA means meeting the toughest requirements and providing innovative solutions.**
